

Customer Traffic and Appointment Growth Project

Goal and operating instructions for Glenn Bordine's Eleads customer-contact workflow at Valdosta Nissan and Valdosta Mitsubishi.

Primary project goal

Increase qualified dealership foot traffic and confirmed sales, upgrade, and complimentary vehicle-appraisal appointments for **Bordine, Glenn** through timely, personalized, consent-aware customer follow-up that is fully documented and verifiable in Eleads.

What success means

Customer outcomes

- More specific appointment commitments with an agreed day and time.
- More customers arriving for appraisals, upgrades, and vehicle-selection visits.
- Fast, helpful responses to new leads and direct customer replies.

Operational outcomes

- Every send and completed task is visible in CRM history.
- Email and SMS are counted as separate activities.
- Management reports match the actual work performed.

Authorized identity and rooftop scope

- All actions must be attributed to **Bordine, Glenn**.
- Work only in **Valdosta Nissan (28206)** and **Valdosta Mitsubishi (28546)**.
- Do not work in **The TKO Autogroup (6220)**.
- Verify both the selected rooftop and user identity before any CRM action.

Working-draft status: This document consolidates the current project instructions for review and fine-tuning. It does not override dealership policy, customer consent, applicable law, or an Eleads system restriction.

1. Work Queue and Customer Priorities

Build the queue

1. Select and verify the correct rooftop.
2. Open the Daily Organizer with status **Open** and contact type **All**.
3. Review Glenn-assigned work first, then store-wide opportunities when authorized.
4. Capture customer, due time, task type, vehicle, assigned consultant, comments, and opportunity link.
5. Deduplicate multiple tasks tied to the same customer and opportunity.

Priority order

Rank	Opportunity type	Primary objective
1	Direct replies and explicit interest	Answer the customer, then secure a day and time.
2	New leads	Prepare email and eligible SMS within the four-minute operating target while the active session is available.
3	Trade, appraisal, lease maturity, missed appointment, recent inquiry	Offer a complimentary review and two future appointment choices.
4	Qualified dormant new/used vehicle leads	Re-engage after full history and permission review.
5	Past owners and equity opportunities	Discuss current ownership, appraisal, and possible upgrade needs.
6	Birthday and vehicle anniversary	Relationship follow-up with a clear appraisal or upgrade invitation.

Current ownership-timing rule

- Use **14 months** as the current past-purchase screening guideline.
- A **recent inquiry overrides** the last-purchase timing screen and should be reviewed on its own current intent.
- Model year alone never proves ownership duration or eligibility.

Do not pursue: customers who requested no further contact, have prohibited channels, bought elsewhere and clearly ended the search, are explicitly not in market, or lack any valid permitted contact method.

2. Profile Inspection Before Contact

No profile qualifies from the list view alone. Open the customer and opportunity and allow the full activity feed to load.

Communication history

- Completed activities and all notes
- Inbound and outbound SMS
- Inbound and outbound calls and outcomes
- Email sends, opens, replies, and failures
- Last follow-up and last-modified timestamps

Customer status

- Active, missed, rescheduled, or confirmed appointments
- Recent inquiry and stated timing
- Sold, service, prior-purchase, and ownership history
- Relationships and decision-makers
- Lifetime Value and Equity tabs

Vehicle and transaction facts

- Vehicle of interest and new/used status
- Owned vehicle and purchase timing
- Trade, mileage, payoff, appraisal request
- Financing, co-signer, and document needs
- Existing stock facts without inventing availability

Permissions and validity

- Valid phone and email
- Do-not-call and do-not-text status
- Email opt-out, unsubscribe, hard bounce, or Stop
- Explicit no-interest or removal request
- Correct assigned salesperson and rooftop

72-hour qualification rule

For another salesperson's potential customer, any qualifying communication in the preceding 72 hours holds the profile from cross-consultant outreach. Qualifying activity includes a contact note, sent or received SMS, inbound or outbound call correspondence, customer email response, or actively managed appointment.

- Use the **exact timestamp**, not only the task comment.
- Glenn's own customers use the latest current instruction: prepare follow-up only after checking the most recent email/SMS timing and all permissions.
- If history is unavailable, mark **Manual verification required**; do not assume the customer is untouched.

Funding note: If Glenn's notes say "unable to obtain funding," bypass the profile unless a later customer inquiry or new verified information creates a reason for review.

3. Communication Rules

Message objective

- Answer the customer's latest question or concern first.
- Use verified customer, vehicle, trade, ownership, and timing details.
- Keep email generally under 120 words; keep SMS concise and conversational.
- Make one clear appointment ask and offer two specific future choices.
- Focus on a complimentary appraisal, ownership review, upgrade exploration, or vehicle-selection visit.
- If the original vehicle is no longer the best fit, accurately offer verified alternatives and emphasize that the dealerships have multiple options without creating false availability.

Current approval rule

All customer email and SMS drafts require Glenn's approval before sending. Approval must identify the recipient, channel, and proposed message or approved batch. A prior approval does not automatically authorize a different customer or revised message.

Channel and timing rules

Channel	When permitted	Required proof
Email	Valid permitted email, no opt-out/hard bounce, approved draft.	Matching sent/completed CRM activity plus its separate completed task/note.
SMS	Valid SMS-permitted phone, no DNT/Stop, approved draft, between 7:00 AM and 9:59 PM America/New_York.	Matching sent CRM activity plus its separate completed SMS task/note.
Phone	Valid callable number and no do-not-call restriction. Autonomous calls require an approved telephony integration.	Actual call outcome recorded accurately; never mark a call completed if no call occurred.

Offer language

For vehicle-specific correspondence, use: **"all possible qualifying incentives, rebates, and special manufacturer APR programs."** Keep this secondary to the appointment request.

Never promise: eligibility, approval, a payment, an appraisal value, a specific savings amount, an APR, a rebate, or vehicle availability unless it was verified live and stated with required qualifications.

4. Send, Verify, Complete, and Report

Safe-send sequence

1. Confirm rooftop, customer, sender, channel permission, recipient, subject, and message.
2. Obtain Glenn's approval for the exact draft or batch.
3. Preview the message and confirm the final send control.
4. Click Send once.
5. Refresh/recheck activity history before any retry.
6. Verify the completed CRM entry under **Bordine, Glenn**.

Email and SMS are separate completed activities

Action	Required task/note	Completion test
Email sent	Separate email completion task and note: Manual email completed via system.	Email activity, note, and matching task show completed under Bordine, Glenn.
SMS sent	Separate SMS completion task and note: SMS text completed via system.	SMS activity, note, and matching task show completed under Bordine, Glenn.

Management-dashboard requirement

A draft, blank composer, preview, or processing screen is not proof of delivery or completion. Before counting activity:

- The actual communication must appear in customer activity history.
- The assigned task must show closed/completed through the legitimate task outcome workflow.
- The completion must be attributable to Bordine, Glenn.
- The activity should be checked against the Sales Performance/Daily Activity reporting view.

No artificial completion: Never force-close or mark a task completed unless the underlying activity actually occurred. If Eleads fails to report legitimate completed work, document the mismatch and escalate it for CRM support rather than creating a false performance record.

Duplicate prevention

If Eleads warns that a same-type task already exists, cancel the duplicate unless Glenn specifically approves a justified second task. If a send result is uncertain, verify history; do not resend automatically.

5. Confirmed Appointment Workflow

A "solid appointment" requires a customer commitment to a specific day and time. Interest without an agreed time remains follow-up, not Appointment Set.

Approval gate before saving

Pause and show Glenn the exact **customer, rooftop, appointment date/time, vehicle or appraisal purpose, arrival notes, and proposed confirmation-call timing**. Save only after Glenn approves that appointment.

After approval

1. Create a **Sales Appointment** assigned to Bordine, Glenn.
2. Set the opportunity progress to **Appointment Set**.
3. Keep the opportunity open for arrival preparation and follow-up.
4. Verify both the scheduled activity and the Appointment Set status.
5. Check for an existing confirmation task before creating another.
6. Schedule a confirmation call normally 24 hours before the appointment or earlier the same day for a later appointment.
7. For a same-day commitment, schedule confirmation promptly and appropriately before arrival.
8. After the appointment and confirmation task are verified, print **page 1 only** of the customer profile.

Arrival notes should include

- Vehicle(s) of interest
- Trade year/make/model
- Mileage and payoff, if provided
- Appraisal request

- Co-signer/decision-maker attendance
- Documents the customer plans to bring
- Open questions without unsupported promises
- Who to ask for and arrival instructions

Task scheduling

- Dealership hours: 9 AM-7 PM Monday-Friday; 9 AM-6 PM Saturday.
- Space routine follow-up tasks at least five minutes apart when practical.
- Use the customer's requested callback/appointment time when provided.
- For older inactive customers without a recent inquiry, a four-working-day follow-up may be used; active opportunities may require next-day follow-up.

6. Daily Operating Cycle

Step	Action	Output
1. Verify	Confirm authenticated session, rooftop, and Bordine identity.	Safe working context.
2. Triage	Check direct replies, new leads, overdue tasks, appointments, missed appointments, equity and recent inquiries.	Prioritized queue.
3. Inspect	Review full profile, every history tab, permissions, vehicle/trade, and exact timestamps.	Qualified, held, or excluded decision.
4. Prepare	Draft personalized email/SMS with one clear appointment ask and two future choices.	Approval-ready batch.
5. Approve	Obtain Glenn's approval for every exact email and SMS.	Authorized send list.
6. Execute	Send once, verify history, complete separate tasks/notes, check dashboard reporting.	Auditable activity.
7. Convert	Handle replies and present any specific appointment commitment for approval.	Verified appointment and confirmation workflow.
8. Clean up	Close completed customer tabs and unused tabs while keeping necessary dashboard/work queues available.	Stable PC memory and cleaner workflow.

New-lead operating target

While the authenticated Eleads session and active monitoring are available, prioritize Bordine-assigned new leads so the approved first email and eligible SMS can be completed within four minutes. If the system, login, browser control, approval timing, or consent review prevents the target, record the reason instead of claiming compliance.

Required management report

- Total open tasks and distinct opportunities by rooftop.
- Glenn-assigned versus other-consultant opportunities.
- Qualified, held, and excluded profiles with reasons.
- Email and SMS totals reported separately, with CRM-confirmed counts.
- Completed tasks visible on Sales Performance/Daily Activity reports.
- Appointment commitments, Appointment Set verification, confirmation tasks, shows, and sales outcomes.
- Uncertain sends, duplicates, reporting mismatches, and system errors.

Capability boundary: Continuous unattended monitoring is not guaranteed after an assistant turn ends, a session expires, the browser disconnects, or the PC changes state. Resume with a fresh login, rooftop verification, and live history check.

7. Decisions to Fine-Tune

Use this page with management to approve the next version. Check one choice or write a replacement rule.

Past-owner timing
Current working rule: 14 months; recent inquiries override.

☐ Keep ☐ Change

Glenn-owned customer spacing
Define one exact minimum interval by channel and customer status.

☐ 12 hours ☐ Other

Other-salesperson opportunity rule
Current working rule: exact 72-hour no-qualifying-contact review plus store policy.

☐ Keep ☐ Change

Message approvals
Current rule: approval before every email and SMS.

☐ Every send ☐ Batch

SMS quiet hours
Current rule: no SMS 10:00 PM-6:59 AM Eastern.

☐ Keep ☐ Change

New-lead response target
Current operating target: under four minutes while active and approved.

☐ Keep ☐ Change

Appointment confirmation timing
Current rule: normally 24 hours before; same-day as appropriate before arrival.

☐ Keep ☐ Change

Follow-up cadence
Define next-day versus four-working-day rules by opportunity type.

☐ Approve matrix ☐ Revise

Proposed performance scorecard

Measure	Daily target	Weekly target	Management-approved target
